

LYNX Touch

Garage Door Automation, Notification and Control

CONTROL YOUR GARAGE DOOR
FROM ANYWHERE

**Open the Door to Security
and Convenience**

Honeywell

Have you ever

driven away and wondered if you left your garage door open?

Did you ever

wake up in the morning and realize that you left your garage door open all night long?

If your garage door acts as an entryway into your home, or if you leave valuables in your garage, leaving the door open all day or night can be a major security and safety issue.

The new LYNX Touch self-contained home control system offers you the ultimate in garage door security and convenience. Through this smart system and Honeywell Total Connect® Remote Services, whether you are at home or away, you can control up to three garage doors per system and know if they are opened or closed right from the touchscreen, tablets or any web-enabled device.¹

The versatility of this intelligent system makes it a perfect solution for your home.

¹Additional equipment required. Not compatible with certain garage doors and garage door openers. Garage door control must have working entrapment protection. Contact your security professional for details.

Garage Door Operation

The “smart” function of garage door operation lets the system know the garage door status and can operate it based on

that knowledge. Unlike a regular garage door opener which simply switches between open and closed, our system will CLOSE the door only if it is open and OPEN the door only if it is closed.

The Key to Enhanced Security and Peace of Mind

With LYNX Touch, you can close your garage door locally and remotely²—or **schedule** the doors to close at a certain time of the day or night—for example, every night at 11:00 p.m. So now you can rest assured, knowing that the door will not remain open all night long.

Right from the LYNX Touch touchscreen keypad you can schedule the door to close after a set period of time, for example, 30 minutes after the door is opened. This enables you to drive away with the comfort of knowing that even if you left the door open, it will be closing soon.

Auto-secure Your Garage Door

Arm your system with the garage door open, and it will automatically become part of the protected area when it's closed. This holds true whether it's closed according to a schedule or manually, and regardless of whether it's done locally or remotely.

The garage door automation, notification and control function of the LYNX Touch and Honeywell Total Connect® enables you to stop worrying

and gives you the ability to easily open and close your garage doors—whether you are at home or away.

Ask your security professional for more information about LYNX Touch today!

²Honeywell Total Connect Remote Services required for remote operation. Ask your security professional for details.
